

# Vendor Query Automation

## Problem

The team handles ~500 emails per week across multiple group mailboxes. Each query requires manually checking, training material, Coupa and Oracle AP before replying. The work is repetitive and time consuming.

## Common Questions:

1. Has my invoice been paid, if not when will it be and if not know what status / needs to happen to authorize payment?
2. New supplier setup, i.e. has my supplier been set up or what is the status
3. I can't make a change to my PO, how do I do that? ... soft close of aged PO's
4. I need to change my suppliers' payments terms, how do I do that and / or what is the status

## Mailboxes and languages:

There are 4-5 languages: English, German, Italian, French and Spanish.

[deaccountspayable@sharkninja.com](mailto:deaccountspayable@sharkninja.com), [fraccountspayable@sharkninja.com](mailto:fraccountspayable@sharkninja.com),  
[noaccountspayable@sharkninja.com](mailto:noaccountspayable@sharkninja.com), [itaccountspayable@sharkninja.com](mailto:itaccountspayable@sharkninja.com)

## Solution

An AI agent that classifies inbound emails, pulls relevant data from Coupa, Oracle AP, and a knowledge base of self-help guides, and drafts a reply. A human approval step sits before sending for anything that needs review.

Steps:

### 1. Email Processing and classification

Monitors multiple emails and classifies incoming emails into different types to then process them based on the information retrieved from the emails. Possible classifications can include invoice status, supplier setup, PO change, payment terms, remittance, and irrelevant.

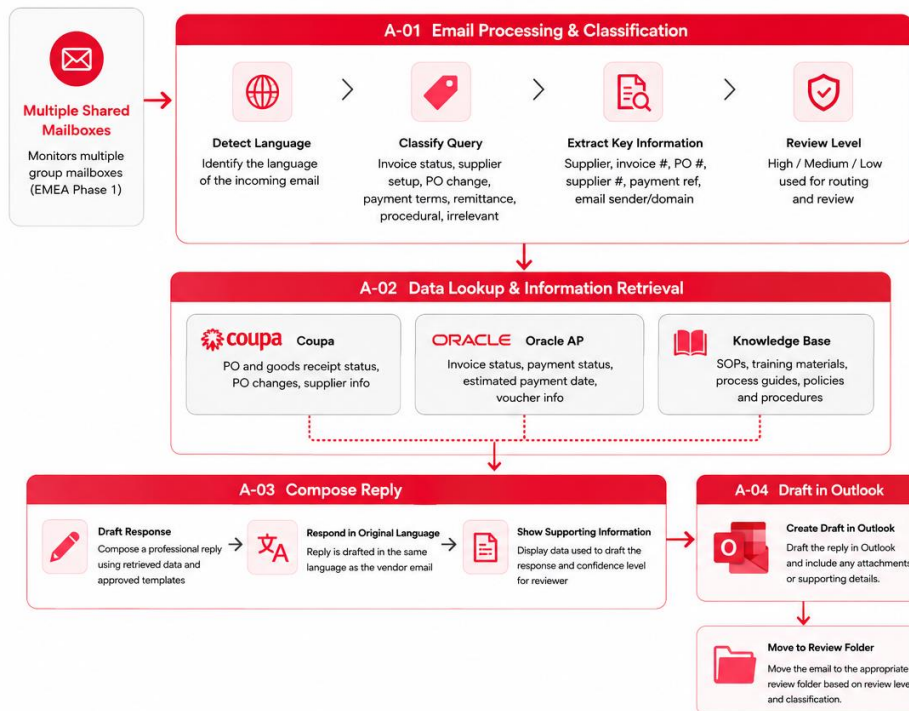

### 2. Data Lookup

Queries Coupa (PO and goods receipt status) and Oracle AP (payment status, estimated date). Consults training material for procedural queries.

### 3. Compose Email

Drafts reply using retrieved data. Human approval before sending, or auto-send for high-confidence standard queries.

## Automate vendor query handling and draft accurate replies in Outlook

## Open Questions

- Which fields live in Coupa vs. Oracle, especially estimated payment date?
- Is Rossum in scope for invoice status?
- EMEA only for phase 1, or include North America?
- Would English be the first language to start with?
- Is there a preference where this is built?

## Next Steps

A call is set up with Rob and Robin for Monday. The first step is to define the scope. Our suggestion is to start with English mailboxes first and then expand based on how well it works for the team.
